SUMMARY

Data-focused System Engineer with experience in building scalable ETL pipelines and data-driven solutions for AI and analytics. Proven ability to transform complex datasets into actionable insights, enhance data quality, and deliver tools that support strategic decision-making. Passionate about leveraging technology to solve real-world business problems.

EXPERIENCE

System Engineer

株式会社Review

October 2024 - Present, Osaka, Japan

- Developed and enhanced features for the company's SaaS data platform, including team-based permission systems, activity tracking, and KPI dashboards to support business and data insights.
- Executed fullstack development tasks, contributing to scalable and reliable platform performance.
- Managed and mentored interns in software development, data processing, and quality assurance workflows.
- Managed large-scale data storage on AWS S3, enabling secure, scalable access for B2B and B2C clients through subscriptions, one-time payments, and customized data packages.
- Implemented user activity tracking systems to capture analytics and generate KPIs, driving data-informed business decisions.

AI Data Trainer - JP | Rufus and Alexa Shopping

Amazon

January 2023 - October 2024, Gurugram, India

- Developed and curated high-quality datasets for AI and Large Language Models (LLMs), directly enhancing the accuracy and user experience of Amazon Japan's shopping features.
- Identified and resolved critical data quality issues, improving the consistency and reliability of training data by 25% for AI-driven shopping applications.
- Ensured data accuracy through precise annotation and validation processes, contributing to a 15% improvement in AI feature performance metrics.
- Created and implemented synthetic data generation techniques, optimizing AI response quality and improving customer interaction satisfaction scores by 10%.
- Streamlined data annotation and generation workflows, boosting team productivity by 20% and accelerating project timelines.

SEPO Associate - JP | Product Authentication

Amazon

June 2021 - December 2022, Gurugram, India

- Conducted comprehensive research and risk assessments for seller accounts in the APAC region, reducing fraudulent activities by 15% through data-driven insights.
- Analyzed sales trends, product tiers, and category performance for over 1,000 seller accounts, generating actionable recommendations that increased overall seller revenue by 12% and improved top-tier product performance by 18%.
- Developed and implemented systematic reporting dashboards, enhancing data visibility and reducing report generation time by 30%.
- Performed root cause analysis on escalated account and operational issues, using data-driven methods to identify underlying process bottlenecks and implement corrective actions.
- Analyzed key performance metrics and operational data for 500+ accounts, identifying trends and process inefficiencies that improved team efficiency and account processing speed by 10%.

EDUCATION

Post Graduate Diploma in Management Business Analytics

Institute of Management and Technologies • Ghaziabad, India • 2023

Bachelor of Commerce - Finance

University of Delhi • New Delhi, Delhi • 2020

SKILLS

Analytical Tools: Power BI, MySQL, Excel, Jupyter Notebook

Programming Languages: SQL, Python (NumPy, Pandas, Matplotlib, Seaborn)

Technical Skills: API Integration, Data Wrangling & Cleaning, Statistical Analysis, Data Modeling & Visualization, ETL Pipeline Development

Languages: English, Japanese - N3 Certified
